Bureau of the Census Housing Units Definitions

It is often asked what the difference is between "two unit" structures and "one-unit attached" structures. The answer can be found in the examples provided by the Bureau of the Census for each structure type. For clear contrast, first consider the definition of one-unit *detached* structures. One-unit *detached* housing units are one-unit structures detached from any other house, with open space on four sides. Structures are considered detached even if they have an attached garage. One-unit *attached* housing units are one-unit structures which have one or more walls extending from ground to roof separating them from adjoining structures. Examples include row houses, town houses, or a single-family house attached to a business. Mobile homes to which one or more permanent rooms have been added are also included in this category. In contrast, two unit housing units are structures strictly containing 2 housing units. This category includes the structures more commonly referred to as duplexes.
